## EXPERIENCE

### **Knobull** — *Developer Intern*

January 2018 - May 2018

North Kingstown, RI

- Designated and organized tasks between team members as project coordinator.
- Updated the appearance of the homepage and style of the website using HTML and CSS.

### **Open Learning Exchange** — *Software Engineering Intern*

July 2017 - October 2017

Cambridge, MA

- Successfully implemented Travis CI testing for application reboot in Angular and CouchDB.
- Added interactive games to the HTML resources in the application library.

## PROJECTS

### **Monopoly**

PC version of the Monopoly board game with human and computer players for up to four players. Written in C#.NET.

### **Longana**

A player vs. computer multi-round tournament dominoes game in C++. Also rewritten in Java for Android.

### **Algo Sort Game**

An educational sorting card game for learning how sorting algorithms work. Created with jQuery and jQuery UI.

## AWARD

### **Sentiment Analysis** (HackHers General Category Winner)

Used Bootstrap to create the UI for an application that analyzes human emotion through machine learning.
